SUMMARY

Full-stack developer with experience delivering responsive, accessible, and maintainable web applications using React and TypeScript. Specializes in component-driven UI development and API-backed full-stack architecture. Proven ability to collaborate across cross-functional teams, translate design and product requirements into production features, and continuously improve usability and performance through iterative delivery.

SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, C, Python

Front-End: React.js, Next.js, React Native (Expo), Nest.js, Tailwind CSS, Material UI, Radix UI, ShadCN UI

Databases & Backend Services: PostgreSQL, MySQL, Supabase, Prisma, Firebase

Tools & Practices: Node.js, REST APIs, Figma, Photoshop, Agile/Scrum, Git, Jira

EXPERIENCE

Software Developer | Modall (Uxbridge, ON) Jun. 2025 - Present

Developed modern, full-stack web and mobile applications for a diverse range of projects.

- Contributed to multiple cross-platform projects, including a product review platform, mobile networking applications, and custom admin panels—using modern frameworks and tools such as **Next.js for web, React Native (Expo) for mobile, Nest.js (Node.js) for back-end APIs, and Tailwind CSS** for responsive styling
- Spearheaded front-end development for the MVP of a networking app for iOS, shipping a **production-ready app in 5 weeks (down from 2 months)**
- Designed **modern UI/UX layouts and components in Figma**, translating wireframes into **functional and responsive custom-built React components** with Tailwind CSS for styling
- Developed data-rich admin dashboards with real-time search, filters, and analytics powered by optimized Prisma/PostgreSQL queries—**reducing average query time from >600ms to ~120ms**
- Designed and implemented automated web scraping pipelines to populate CMS/Product datasets, **decreasing manual data entry workload by over 96%**
- Improved codebase quality by enforcing standardized UI patterns, reusable components, and modular API integrations—**reducing UI defects by ~35% across sprints**
- Worked in an **Agile Scrum environment**, using **Git** for version control and **Jira** for issue tracking, ensuring efficient, transparent collaboration and sprint delivery

Full-Stack Web Developer | EdTech Canada (Markham, ON) Jun. 2024 - Jun. 2025

Designed and developed a scalable warehouse management platform.

- Contributed to the redesign of a warehouse management platform, replacing legacy components with a **modern, scalable full-stack solution**
- Designed and optimized a relational MySQL database schema to handle inventory, users, transactions, and RMA workflows—**improving data integrity and reducing query complexity for high-volume operations**
- Developed a suite of RESTful APIs** using Node.js and Express.js, enabling real-time inventory updates, item scanning, and automated validation logic that **reduced data inconsistencies by over 40%**
- Implemented high-performance search, filtering, and barcode-driven lookup features, **optimizing database interactions with indexed queries and reducing average item lookup time by 30-45%**
- Built a **modern, responsive and intuitive** front-end using React, Material UI, and custom state management patterns—**improving usability for warehouse staff and reducing common user errors by ~25%**

Freelance Web Developer | Client Project (Markham, ON) Mar. 2024 - May. 2024

Developed and deployed a professional website for a Taekwondo studio.

- Designed and developed a responsive React website for a local business, **improving online presence and user engagement**
- Created UI/UX designs in Figma** and implemented them as mobile-optimized components using React-Bootstrap
- Integrated APIs such as Google Maps and EmailJS to deliver key functionality

PROJECTS

FEH Inheritance Planner | *Next.js; Supabase; Tailwind* | <https://feh-inheritance-planner.vercel.app/>

- Built a constraint-based skill planning web app (Next.js + TypeScript + Supabase) that generates high-quality action sequences under limited resources and dependency rules
- Designed and implemented a **heuristic planning engine** that models prerequisites as a dependency graph, scores candidate actions, and prioritizes reusable-seed strategies for multi-target efficiency
- Added **AI-assisted decision support** (OpenAI API) to select among prevalidated legal actions, improving planning quality while keeping rule enforcement deterministic in code
- Shipped the project using a **rapid “vibe coding” workflow** (prompt-driven prototyping + fast iteration), then hardened it with explicit constraints, validation logic, and production-oriented guardrails

Should I Rip | *React.js; Supabase; Tailwind* | <https://ryanperera.github.io/shouldirip/>

- Developed a **responsive web app** to help users evaluate collectible card purchase decisions
- Automated daily market data scraping with GitHub Actions to update a Supabase database of cards and prices
- Designed and implemented **custom UI components** using React.js, Tailwind CSS, and ShadCN, visualizing trends with Recharts

Card Collection Web App | *React.js; Supabase; Material UI* | <https://ryanperera.github.io/ciphercollector/>

- Built an immersive card viewer and database for a collectible card game, using React.js, with Supabase as a **Backend-as-a-Service** in order to store card data

University of Toronto, MaRS Quiz Website | *React.js; Node.js; Express; PostgreSQL*

- Worked with a research team to develop a web app for a non-verbal ability test, to score and track research participants. Followed **agile development practices**

EDUCATION

Bachelor of Computer Engineering | *McMaster University* (Hamilton, ON)

Apr. 2021

- Won the **Innovation Award** for my Capstone project BravEye, which utilized a Raspberry Pi in conjunction with thermal and LiDAR sensors, and AR glasses in order to create live and unobstructive heat and aerial maps. Designed to assist firefighters with detecting life and thermal hot-spots, as well as exit routes
